

Aftercare instructions for permanent hair removal electrolysis

Do

- Apply antiseptic cream to treated area 3 times in the 24 hours following your treatment.
- If your skin feels hot after treatment; bathe with a cold or iced salt water solution regularly in the hours following treatment, this reduces inflammation and speeds up the healing process. (Add half a teaspoon of salt to one-cup of boiling water and chill).
- Apply sun block daily to prevent sunlight from interfering with the healing process.

Do not

- Touch the area with your fingers.
- Pick any spots that may appear, sometimes small pinprick crusts may appear, it is important that they are not removed from the skin sooner than the natural process would allow.
- Wear make up on the area if any crusts or spots appear.
- Expose the skin to sun, sunlight or sunbeds for 2 weeks after treatment, if you are having intensive treatment we recommend that you avoid sun exposure on the area for the duration of your course of treatment.
- Swim for 48 hours. Apres oil can be used at home regularly on the area being treated; this will condition the skin and hair and make the treatment easier on you and your skin.
